

Universal Control

Universal Control
Uni-T-Stat

Tired of using your Knob and Switch control? Mermaid has the solution! Using Mermaid's Universal Thermostat Control you can now convert your old (functioning) knob and switch control to a DIGITAL PROGRAMMABLE THERMOSTAT!

The device operates by intercepting the power to the marine air conditioning unit. Yes, ANY marine air conditioning unit with a functioning knob and switch control!

The Uni-T-Stat is easy to install and now allows you to use the included programming features to aid in dehumidification of your vessel by converting all control to memory back-up digital programming using the soft-touch control panel.

As mentioned, the current knob and switch does have to be functioning, however, it is only used once or twice (if the unit has heat) and will not be touched again! Simply turn the settings on the knob and switch to the "HIGH FAN - HIGH COOL" or "HIGH FAN - HIGH HEAT" and now everything would work off the digital programmable thermostat! Display can be either in Fahrenheit or Celsius scale and can be in 12 or 24 hour mode. 220v model units also work on this same control!

Product includes: Control box, Digital Programmable Thermostat, 20ft of Thermostat Cable, and power cable necessary to power the unit.

i.e. Air conditioning for yachts up to 31'

Dimensions of Control Box:

L - 6", W - 4", H - 8"
